

FROM PILOT TO PRACTICE

A 90-day MedChrons adoption plan

For Lakefront Injury Group (sample) — start with one workflow, prove it with evidence, then scale.

Prepared by Alex Donnelly · Customer Onboarding Specialist (sample)

Independent work sample from EvenUp's public materials. Not affiliated with or endorsed by EvenUp. Fictional firm; figures illustrative.

Chronology work is repetitive — and disconnected

- Records arrive in volume and vary case to case.
- Chronologies are built by hand, inconsistently across teams.
- Attorney review happens late, and quality depends on who did the work.
- Missing records and treatment gaps surface in demand prep — when they are most expensive.

Start small. Prove it. Then scale.

1

Start with one workflow

Medical chronologies — high-frequency, high-friction, high-value.

2

Test with one cohort

A small, deliberately chosen group on real matters.

3

Measure the impact

Operational and human evidence, not anecdotes.

4

Scale only when trusted

Expand on evidence — never on enthusiasm alone.

The right first workflow

1

Faster synthesis

Thousands of pages become a searchable treatment timeline.

2

Verify in place

Diagnostic highlights and direct exhibit links — trust through verification.

3

See the gaps

Treatment and record gaps surface early, not in demand prep.

4

Clean handoffs

Clear roles between paralegal, attorney, and case manager.

Not logins. A repeatable behavior.

- Defined intake and case-eligibility criteria
- A consistent request and submission process
- A paralegal review-against-source checklist
- An attorney review protocol — what 'attorney-ready' means
- A documented escalation and feedback loop

A small, deliberately chosen cohort

1

The cohort

2 attorneys, 4 paralegals, 1 records liaison, 1 champion — ~15–25 matters.

2

Include

Standard MVC & premises matters with records collected.

3

Exclude at first

Catastrophic or highly fragmented files — unless complexity is the test.

4

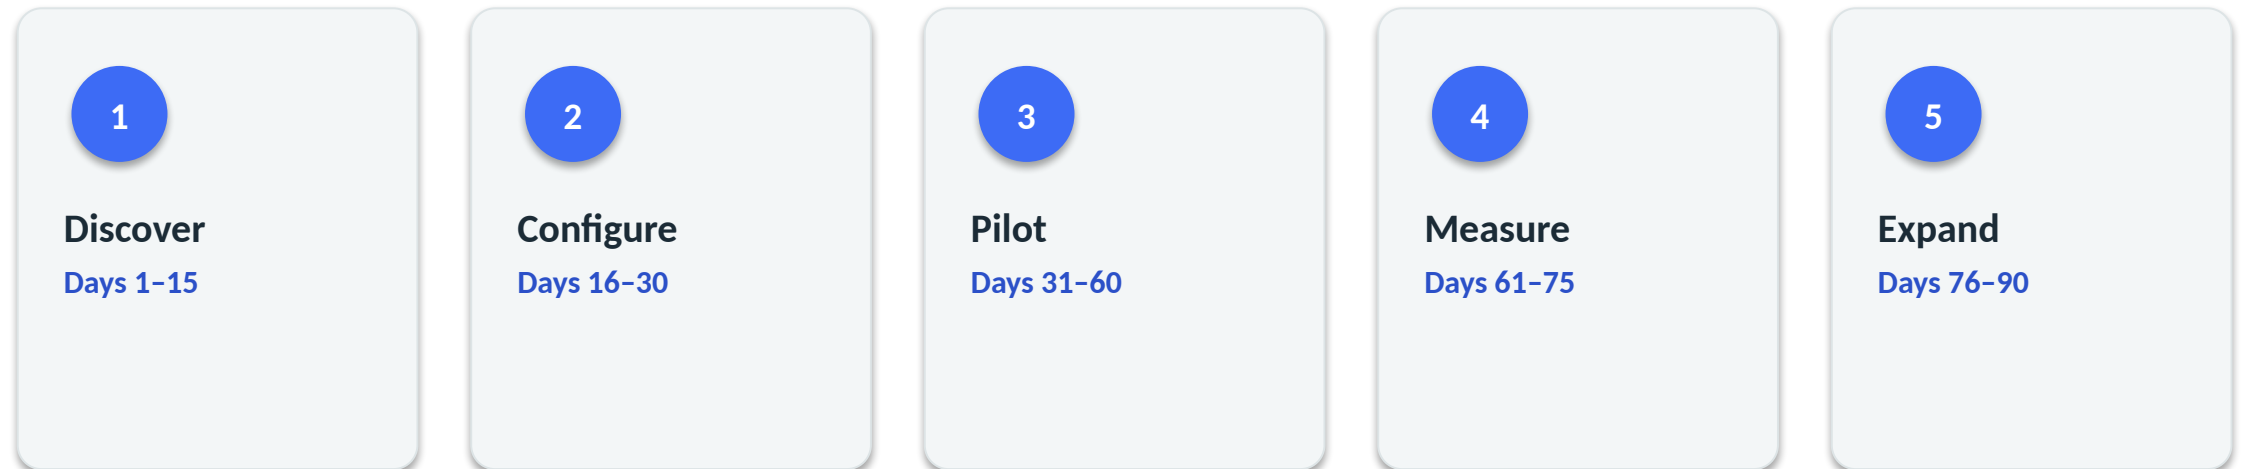

Cadence

Weekly huddle, shared issue log, weekly completed-matter review.

THE 90-DAY ROADMAP

Discover → Configure → Pilot → Measure → Expand

Mapped onto EvenUp's model: set the vision, empower the firm, make the change stick.

Who does what in the pilot

Attorney

Works from a verified chronology; faster orientation, more time for strategy.

Paralegal & medical

Shifts from extraction to verification, gap-spotting, and case-story development.

Case manager

Acts on surfaced gaps — records requests and treatment follow-up, early.

Records & admin

Predictable file readiness and clean handoffs.

Sponsor / ops lead

Watches adoption health, clears blockers, reinforces the behavior.

What we'd measure together

Targets set with the firm at kickoff. We measure operational value — not downstream settlement lift, which is hard to isolate in 90 days.

Adoption

% of eligible matters using the workflow

Speed

Days from record-readiness to attorney-ready

Efficiency

Paralegal time per chronology, before vs after

Quality

Material corrections / escalations per matter

Utility

% of attorneys who say it accelerated review

Confidence & reuse

User confidence; repeat use as support tapers

Trust is designed in

1

Human review required

Every chronology reviewed against source before it's relied on.

2

Clear escalation

A defined path when a date, diagnosis, or provider looks wrong.

3

Sample audits

Spot-checks on completed matters to keep quality honest.

4

Feedback loop

Issues routed back to training, process, and EvenUp product.

Continue, refine, expand — or pause

1

Continue

Keep running the cohort; the workflow holds.

2

Refine

Adjust eligibility or handoffs, then re-run.

3

Expand

Add a team, office, or second workflow — on evidence.

4

Pause

If friction is still high, redesign before scaling.

The MedChron is the first repeatable adoption playbook — not the last product rollout.

Start with one workflow.

Prove it with evidence, make it repeatable, then run it firm by firm.
